JustDrinks LTD analysis: strategic brief

Sales, purchasing and inventory, 2016 financial year | Brandy Sango

Purpose

Answer the leadership team's questions about sales, vendors, inventory and profit for a twelve-month period, clearly enough that anyone can follow, and publish the work as a portfolio project. The source is a case-study data set of sales, purchases and stock counts for an 80-store drinks retailer.

Audience

A general audience with no data background, such as a hiring panel, colleagues or a LinkedIn reader. Slides carry one big number and one short headline. Detail and wording for the speaker are in the notes.

The one message

JustDrinks has a strong revenue base, but buying does not keep up with the holiday peak. In December sales were twice purchases, so the clearest gains are in timing, mix and store results.

$452M	$130M	85%	15.8%
sales	gross profit	from two sizes	from Diageo

What the audience should do afterwards

Buy holiday stock earlier, protect the 750mL and 1750mL sizes, use vendor volume to negotiate, copy what the best stores do, and track profit by product.

Storyline

The deck follows the report page by page, so each claim can be found and checked.

1	**Title**	Cover
2	**The brief: $452M in sales, 80 stores, three questions**	Report page 1
